

Ravi Saxena

Senior Software Engineer — Full-Stack & Backend Systems

ravisaxena230599@gmail.com | +91 96430 19798 | github.com/ravisaxena23 | linkedin.com/in/ravisaxena23

SUMMARY

Senior Software Engineer with 5+ years building scalable distributed systems, microservices, and cloud-native SaaS platforms using Node.js, React, TypeScript, AWS, and Kafka. Experienced in system design, API design, event-driven architecture, performance optimization, and AI-assisted engineering workflows. Delivered solutions supporting 1,000+ enterprise tenants and millions of monthly transactions.

SKILLS

Languages: JavaScript, TypeScript, SQL

Backend & Security: Node.js, Express, REST APIs, GraphQL, API Design, Microservices, Event-driven Architecture (Kafka, AWS SQS), Data Modeling, Design Patterns, ABAC, RBAC, OAuth

Databases: PostgreSQL, MongoDB, MySQL, Redis

Frontend: React, Redux, TypeScript, Micro-Frontend Architecture, Accessibility (WCAG AA)

System Design & Cloud: System Design, Scalable Architecture, Distributed Systems, Multi-tenant Architecture, High Availability, Performance Optimization, Caching, AWS (Lambda, ECS, RDS, S3), Docker, Kubernetes, CI/CD (GitHub Actions)

AI/LLM Integration: Claude Code, Cursor, MCP (Model Context Protocol), Prompt Engineering, LLM Integration, AI-Assisted Development, Generative AI

Leadership & Process: Technical Leadership, Code Reviews, SDLC, Agile/Scrum, Cross-functional Collaboration

Testing & Observability: Jest, Mocha, Cypress, Unit Testing, Structured Logging, Monitoring

EXPERIENCE

Simplr Sept 2024 – Present
Software Engineer — Enterprise SaaS Platform

- Architected scalable backend microservices and REST APIs powering content creation and publishing workflows for 1,000+ enterprise tenants, handling millions of monthly API requests.
- Built and optimized React/TypeScript content-authoring workflows used across global enterprise tenants, improving usability, accessibility, and platform adoption.
- Engineered event-driven pipelines using Kafka and AWS SQS, cutting processing latency 12%, and migrated authorization from RBAC to ABAC, reducing security incidents 11%.
- Led system design reviews and architectural discussions for high-traffic services, improving scalability, caching efficiency, and API reliability while accelerating feature delivery.
- Strengthened backend reliability through validation, structured logging, and error handling, reducing production issues and improving mean-time-to-debug.
- Automated an AI-powered PR review workflow (Claude) integrated into CI/CD to flag dependency vulnerabilities and enforce security updates, saving an estimated 2 hours/week of manual review time.

Tech: Node.js, PostgreSQL, Kafka, AWS, Kubernetes, Docker, React, TypeScript | Star Performer (2025)

SHL Global Jul 2021 – Aug 2024
Associate Software Engineer — Global HR-Tech Platform

- Engineered backend services for a WebRTC-based interview platform, including session orchestration, audit logging, and data persistence, boosting interviewer throughput 20%.
- Designed scheduling and calendar-sync microservices with conflict resolution logic, automating 60% of manual interview scheduling.
- Delivered reusable React/TypeScript frontend components integrated with backend REST APIs, cutting feature delivery time 20%.
- Authored unit and integration test suites (Jest, Mocha), reducing regression bugs and improving code coverage across releases.

Tech: Node.js, MongoDB, MySQL, AWS, Docker, React, WebRTC

CERTIFICATIONS & AWARDS

MERN Stack Specialization (Coursera, 2021) | Most Valuable Developer (3x, SHL Global) | Hackathon Winner — SODA Foundation (2022)

EDUCATION

B.Tech in Computer Science & Engineering, Galgotias University (2017–2021) GPA: 8.5 / 10
